PROFESSIONAL SUMMARY

Full-stack Software Engineer with 3+ years of experience designing and delivering scalable enterprise web applications for financial services and business platforms. Specialized in building modern frontend applications with React, Next.js, Angular, and TypeScript, backed by Spring Boot microservices and RESTful APIs. Experienced in cloud deployment, performance optimization, and secure application development using AWS, Firebase, and modern DevOps practices. Skilled in integrating AI and LLM-powered features to automate workflows and enhance user experiences.

EXPERIENCE

Software Engineer I | Jami Partners (Onsite)

Aug'2025 – Present

- Architecting and developing scalable enterprise web applications using Angular, React, Next.js, and TypeScript for financial products, including fund management portals, digital customer onboarding platforms, investment dashboards, and Pakistan Stock Exchange (PSX) trading solutions, while establishing reusable architecture, shared components, and development standards.
- Driving application performance and user experience improvements by optimizing Core Web Vitals through lazy loading, code splitting, efficient state management with Redux, React Query, and NgRx, and optimized REST/GraphQL integrations for responsive, high-performance applications.
- Developing and integrating Spring Boot microservices, .NET, REST APIs, and backend services for financial applications, contributing to secure, scalable enterprise solutions deployed on AWS and IIS.

Software Engineer | Sofstica Solutions (Onsite)

June'2024 – Aug'2025

- Designed, developed, and maintained scalable enterprise web applications using Angular, React, Next.js, TypeScript, and WordPress, delivering healthcare, networking, and business management platforms with reusable components, responsive UI, and performance-focused frontend architecture.
- Developed and integrated Spring Boot microservices and RESTful APIs, implementing secure authentication and authorization with JWT and Spring Security, enabling real-time communication through WebSockets, and integrating LLM-powered features using RAG (Retrieval-Augmented Generation) and OpenAI APIs to enhance intelligent search and AI-assisted workflows.
- Integrated MySQL, PostgreSQL, Firebase, and AWS services to build scalable backend solutions, implement cloud deployments, integrate third-party APIs, and support secure, high-performance enterprise applications.

AI/LLM Software Engineer | Turing (Contract)

Nov'2025 - Mar'2026

- Evaluated and improved the performance of Large Language Models (LLMs) by analyzing responses, identifying reasoning and coding issues, and providing high-quality feedback to enhance model accuracy and reliability.
- Contributed to AI training and evaluation projects involving software engineering, code generation, debugging, prompt engineering, and technical reasoning across multiple programming languages and frameworks, ensuring high-quality datasets for frontier AI models.

FastTech Systems | (Onsite)

Nov'2023 – May'2024

- Developed responsive and user-friendly web applications using React.js, JavaScript, and Tailwind CSS, building reusable UI components and optimizing cross-browser compatibility, accessibility, and performance across desktop and mobile devices.
- Built and maintained backend services using Node.js, Express.js, and MongoDB, developing RESTful APIs, integrating third-party services, and contributing to code quality through documentation, unit testing, and collaborative code reviews.

EDUCATION

BS. COMPUTER SCIENCE | IBA University

2020 – 2024

Majors: Data Structures, Algorithms, Machine Learning, Data Science, Enterprise Application Development

COMPUTER SKILLS

Frontend: React.js | Next.js | Angular | JavaScript (ES6+) | TypeScript | HTML5 | CSS3 | SCSS/SASS | Redux Toolkit | React Query (TanStack Query) | NgRx | Bootstrap | Tailwind CSS | Material UI | Framer Motion | GSAP | Micro Frontends | Web Performance Optimization

Backend: Java | Spring Boot | Spring Security | Hibernate (JPA) | REST APIs | GraphQL | Microservices | Kafka | WebSockets | JWT Authentication | JUnit | API Design | System Design | Node.js | Express.js

Databases: PostgreSQL | MySQL | Oracle | SQL Server | MongoDB | Redis

Cloud & DevOps: AWS | Firebase | Docker | Cloudflare | Vercel | CI/CD | GitHub Actions | Bitbucket Pipelines | IIS

Tools & Platforms: Git | GitHub | Bitbucket | Jira | Postman | Swagger | IntelliJ IDEA | VS/VS_Code

AI & LLM: OpenAI API | Prompt Engineering | RAG | Vector Search | Function Calling | AI Agent Integration | LLM Evaluation | AI-Assisted Software Development (Claude Code, OpenAI Codex, GitHub Copilot)

PROJECTS

Pakistan Stock Exchange (PSX) Investment Platform – UBL Funds | *In Progress*

Tech Stack: Angular, .Net, SignalR

- Real-time PSX stock trading platform for UBL Funds enabling live market tracking, buy/sell operations, and portfolio management.

UBL Funds Online Portal | URL: [Click Here](#)

Tech Stack: **Tech Stack: Angular, TypeScript, Spring Boot, .NET, Redis, Oracle, Microservices, IIS**

- Enterprise online investment platform serving **100K+ users**, enabling secure fund management, investments, redemptions, conversions, allocations, and portfolio tracking.

Jobs Monitoring & Analytics Dashboard | (Live but Private)

Tech Stack: **React 19, Spring Boot, Socket.IO, WebSockets, Tailwind CSS**

- Real-time operations dashboard enabling live monitoring of backend jobs, financial transactions, and customer account opening workflows with SignalR-powered status updates and execution tracking.

Onboarding Journey for UBL Funds Customers | URL: [Click Here](#)

Tech Stack: **React 19, Material UI, Redux, Framer Motion, .NET, Oracle, SQL**

- UBL Funds digital onboarding experience with dynamic workflows, secure OTP verification, and persistent application state, enabling customers to resume, review, and update submissions across sessions.

UBL Funds PFVPS Portal | (Live but Private)

Tech Stack: **Angular, TypeScript, .NET, SQL, IIS.**

- Enterprise PF/VPS management solution delivering secure account management, fund tracking, financial reporting, and portfolio analytics for long-term investment planning.

Rapid Response Team | URL: [Click Here](#)

Tech Stack: **Angular, TypeScript, Spring Boot, Redis, MySQL, Microservices, Firebase, AWS, Docker**

- Built a large-scale hospital operations platform supporting role-based administration, real-time alerts, and workflow automation across healthcare workflows with multilingual support and high availability.

Routica Explorer | URL: [Click Here](#)

Tech Stack: **Angular, TypeScript, Material UI, Spring Boot, MySQL**

- Developed a network management system with centralized device configuration, inventory tracking, and real-time router location monitoring using map-based visualization.
